

## NetworkIP Services Overview

# Transaction Services

NetworkIP's high-volume, real-time Transaction Services can enable multiple points of sale and interconnection with over 506,000 retail locations worldwide. Our Web Services API eases the integration of merchandising, loyalty programs, and stored-value payments with phones, mobile devices, Web and physical storefronts.

At the heart of NetworkIP Transaction Service is its award-winning IBM Informix Database Solution (IDS) currently managing hundreds of millions of end-user accounts and capable of billions of transactions per month.

### Contact Information:
